COVER IMAGE

Proper stewardship of financial and manpower laboratory resources in the current healthcare climate is more important now than ever. The cover image of this issue of *The Journal of Applied Laboratory Medicine* highlights the article by Beal et al., Removing Cerebrospinal Fluid Antibody Orders from the Test Menu Results in a Dramatic Decrease in Order Volume. This report articulates strategies for changing clinician requesting patterns for cerebrospinal fluid (CSF) testing of *Borrelia burgdorferi*, the agent of Lyme disease, *Toxoplasma gondii*, and cytomegalovirus. The line graphs in the figure illustrate the dramatic reduction in unnecessary CSF orders by 91%, 93%, and 98%, respectively.
