COVER IMAGE

As the title of this Special Issue, "The Full Spectrum of Sepsis and Bloodstream Infections: From Diagnosis to Management," specifies, care of the suspected septic patient involves many aspects of laboratory and clinical medicine. This issue's cover is intended to represent this continuum with the upper panel displaying an electron micrograph of bacteria growth on a background of red blood cells; the middle panel consisting of a chromatogram from Matrix Assisted Laser Desorption/Ionization (MALDI) Time of Flight (TOF) Mass Spectrometry, a technique that is becoming a standard in clinical microbiology laboratories; and the lower panel depicting a multidisciplinary stewardship conference at which members from a broad clinical and laboratory background discuss policy and patient management.
